Flexlight

The new flexible LED desk light

Technical details:

Illuminant: LED
Light colour: warm white
Luminous flux: 690 lm +/- 10%
Connected load: 10W
Power supply: 5V, d.c.
Power supply unit: 220-240V, max. 2A/5V
Protection class: IP 20

Light dimensions: 62 x 42 x 5.5 cm (W x H x D)
Light head: 15 x 5 cm
Weight of light: 0.65 kg

The ball joint on the clamp mount makes it
easy to move the light arm in lots of different
directions.

The USB charging station has two USB A
power outlets for use in connecting any de-
vices that require a power supply of 5V
(max. 250 mA each).

Note: Not a data USB

It is attached to the power supply of the
light, and is also used to supply it with
electricity.

Design: pearl creative.

Maximum flexibility

- Flexlight adjusts perfectly to any requirement and working situation: thanks to the swan necks and ball joint on the clamp mount, the light head and arm can be put into any positions.

The perfect light for children's eyes

- The Flexlight LED desk light illuminates the field of vision without shadows and dazzle. Having the right position is also important. **The light can be adjusted with such a high level of flexibility that children's eyes won't get tired when reading, writing or doing arithmetic.**

Relaxed eyes encourage a relaxed seating position. This helps to prevent a cramped sitting position and postural damage.

- The clamp mount keeps the Flexlight safely in position without taking up much space itself - even when the desktop is tilted. (For panel thicknesses from 13 to 23 mm)

Dimmable light

- A switch enables the light to be dimmed individually, to vary the illuminance as desired from 100% to 5%.
- The light is completely flicker-free.
- The LED light is particularly economical: saves 85% of the electricity used by a 60 watt bulb.

Brilliant additional functions: USB charging station

- A USB charging station is attached to the bottom of the light arm that can be used to charge a mobile phone, iPod and other electronic devices.

Change the colour as desired

- The smart switch not only switches the light on and off, but also changes the colour at the touch of a button.

Night light

The switch is back-lit in colour, even when it is switched off.

This means that the Flexlight can also be used as a night light. This function can be deactivated if desired.
